EDUCATIONAL BACKGROUND

Automation Electrical Engineer – Ho Chi Minh City University of Transport – FEUT

JOB POSITION: Fresher FullStack Nodejs-ReactJs

SOFTWARE

- Programming Languages: HTML5, CSS, SCSS, JavaScript, TypeScript, Java, Nodejs,...
- **Database**: MySql, Sql Server, MongoDB,...
- **Programming Tools:** Visual Studio Code, IntelliJ,...
- **Framework/ThirdLibrary:** ReactJS, Redux, Redux-toolkit,React Query, Bootstrap, Tailwind, SpringFramework, SpringBoot, NodeJs,...
- Tools: MySQL, SQL Server, GitPash, MongoCompass, Postman, Docker, Redis...

WORK EXPERIENCE

August 2023 - Now:

Position FullStack Developer

Organization Freelance

Job description Ecommerce Application

Website(Dien May Xanh Clone)

Work Description:

- 1. Use OTP and captcha authentication for registration, login, forgotten password, and can login by google
- 2. Create a good user experience when paginate does not require loading
- 3. Use realtime chat for admins and users to interact
- 4. Use redis to optimize the number of requests to the server
- 5. Use elasticsearch to find products by title, description, attribute faster and more accurately
- 6. Use rabbitmq to be able to send notifications when there are discount vouchers or new product launches.
- 7.

Technologies/tools using:

- DesignPattern (SingleTon, Attribute, Pholymorphic,...)
- NodeJs
- ReactJS
- MongoDB
- Postman
- Git/GitHub
- SocketIO
- Redis
- Docker
- RabitMQ
- ElasticSearch
- Kubernetes(I'm studying and will add it later)
- MicroService(I'm studying and will add it later
- AWS(I'm studying and will add it later)

May 2023 - August 2023:

Position Backend NodeJs

Organization Wisdom Engineering and Business Solutions

Job description Delivery App

Project Description: Together with the team, we created a mobile delivery application system, the server side was coded by nodejs

Work participation:

- 1. Determine the number of database elements and create the database.
- 2. Used design patterns to make it easy to expand on the backend.
- 3. Create features to add, delete, edit, product information, user accounts, discount codes, order information,...
- **4.** Used design patterns in mongo to optimize search

Technologies/tools used:

- DesignPattern
- NodeJs
- MongoDB
- Postman
- SocketIO

April 2023 - May 2023:

Position Backend and Frontend

Organization None

Job description Book library management

Project Description: Project borrows books from the library and can be purchased through card payment.

Development Steps:

- 1. Determine the number of database elements and create the database
- 2. Create packages to easily code and debug on the back-end(config, dao/repository, service, controller, dto, utils,...)
- 3. Configure front-end interface, install 3rd library and interface code
- 4. Test Rest API and deploy on github

Technologies Used:

- HTML5, SCSS, Typescript
- ReactJS
- Bootstrap
- Okta
- Oauth2
- Java Spring Boot
- Hibernate, JPA
- MySql
- Postman
- Git

PROFESSIONAL SUMMARY

- Can research new technology. Teamwork and good communication.
- Knowledge of relational database
- Knowledge about managing and using git
- Able to withstand high pressure at work, eager to learn, proactive in solving problems.
- Able to read and understand English documents

Future plan:

- Learn more Microservices Architecture, Docker, Kubernetes, AWS,... after working time
- Learn more about optimizing databases to be ready to work with large systems
- Fluent in English communication in the next 6-8 months
- Become a full-stack developer in the next 1-2 years
- Become a Devops engineer in the next 4-5 years
- Enjoy life with passion for programming
